

# World Water Day 2023

## Accelerating Change to solve the water and sanitation crisis

In 2015, the world committed to Sustainable Development Goal (SDG) 6 as part of the UN 2030 Agenda – the promise that everyone would have safely managed water and sanitation by 2030. Right now, we are seriously off-track. There is an urgent need to accelerate change – to go beyond 'business as usual.'

[World Water Day 2023](#) is about accelerating change to solve the water and sanitation crisis.

Dysfunction throughout the water cycle undermines progress on all major global issues, from health to hunger, gender equality to jobs, education to industry, and disasters to peace. Billions of people and countless schools, businesses, healthcare centers, farms, and factories are being held back because their human rights to water and sanitation still need to be fulfilled.

The latest data show that **governments must work on average four times faster** to meet SDG 6 on time, but this is not a situation that any single actor or group can solve.

Water affects everyone, so we need everyone to take action.

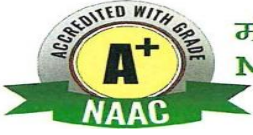

### You can play your part

The global campaign [Be the change](#) encourages people to take action in their lives to change how they use, consume and manage water. These promises from individuals and communities will contribute to the [Water Action Agenda](#) alongside larger commitments from governments, companies, organizations, institutions, and coalitions.

### UN 2023 Water Conference, the year of commitments

These voluntary commitments will form the [Water Action Agenda](#), designed to deliver rapid, transformative change in the remainder of this decade. Are you ready to add yours?

Therefore, to spread this message, MANUU is organizing the World Water Day program on the Eve of WWD i.e. March 21, 2023. The following program is proposed.

Day & Date	Time	Venue	Activity/Program	Remark
