for

**Master of Technology** (Computer Science)

M.Tech. (CS)

(w.e.f. 2025-26)

# Department of Computer Science and Information Technology School of Technology MAULANA AZAD NATIONAL URDU UNIVERSITY

#### 1. Vision and Mission

#### 1.1 Vision

To meet the requirements of the society by imparting knowledge, ethics and moral values with a holistic approach.

#### 1.2 Mission

To impart quality education and to undertake research and extension with emphasis on application and innovation that cater to the emerging societal needs through all-round development of students of all sections enabling them to be globally competitive and socially responsible citizens embedded with ethical values.

#### 1.3 Strategies for Attaining the Vision and Fulfilling the Mission

Following strategies will be used to ensure the accomplishment of the stated vision and mission:

- 1. To create an ambiance for healthy teaching-learning process and attract the motivated students to the Department of Computer Science and Information Technology
- 2. Ensure that the curriculum followed is comparable to the relevance of local, national, regional and global development
- 3. To motivate the potential faculty members/ educators who are constantly upgrading their pedagogical approaches to motivate students and to enhance learning among them
- 4. Provide opportunities to students for global exposure, industrial internships, project based and research-based learning

#### 2. Program Educational Objectives

Program Educational Objectives (PEOs) are broad statements that describe the career and professional accomplishments that CS&IT Department is preparing its graduates to achieve during the graduation. Following four PEOs are defined as:

**PEO 1.** To train the graduates to acquire in depth knowledge of fundamental concepts and programming skills for holistic development.

**PEO 2.** To prepare the graduates for productive careers in software industry, corporate sector, Government Organizations.

**PEO 3.** To prepare graduates to acquire excellent computing ability so that they can analyze, design and create Solutions for real time problems.

**PEO 4.** To apply the current tools and techniques to create systems for solving Industry oriented problems.

### 3. Program Outcomes (POs)

Program outcomes are the narrower statements that describe what students are expected to know and be able to do upon graduation. POs represent the knowledge, skills and attitudes the students should have at the end of a program. Following are the statements for POs for computer application program. At the time of completing their degree requirements, students will be able to:

- PO<sub>1</sub>: Apply the knowledge of Mathematics, Science, and Engineering fundamentals, and an engineering specialization to solution of complex engineering problems (Engineering Knowledge).
- PO<sub>2</sub>: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences (**Problem analysis**).
- PO<sub>3</sub>: Design of solutions for complex engineering problems and design of system components or processes that meet the specified needs with appropriate considerations of public health and safety, and cultural, societal, and environmental considerations (**Design/development of solutions**).

- PO4: Use research-based methods including design of experiments, analysis and interpretation of data and synthesis of information leading to logical conclusions (Conduct investigations of complex problems).
- POs: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling complex engineering activities with an understanding of limitations (Modern tool usage).
- PO6: Apply reasoning within the contextual knowledge to access societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice (**The engineer and society**).
- PO<sub>7</sub>: Understand the impact of the professional engineering solutions in the societal and environmental contexts, and demonstrate the knowledge of, and the need for sustainable developments (Environment and sustainability).
- **PO8:** Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice (**Ethics**).
- PO<sub>9</sub>: Function effectively as an individual independently and as a member or leader in diverse teams, and in multidisciplinary settings (**Individual and team work**).
- PO<sub>10</sub>: Communicate effectively on complex engineering activities with the engineering community and with society at large such as being able to comprehend and write effective reports and design documentation, make effective oral presentations, and give and receive clear instructions (Communication).
- PO<sub>11</sub>: Demonstrate knowledge and understanding of engineering management principles and apply those to one's own work as a member and leader of a team to manage projects in multidisciplinary environments (**Project management and finance**).
- PO<sub>12</sub>: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change (**Life-long Learning**).

#### 4. Program Specific Outcomes (PSOs)

Program Specific Outcomes (PSOs) are the statements that define outcomes of a program which make students realize the fact that knowledge and techniques learnt in a specific course has direct implication for the betterment of society and its sustainability.

- **PSO 1:** The ability to design and develop applications using the knowledge of Mathematics, Science and Engineering fundamentals.
- **PSO 2:** Ability to test and analyze the quality of developed applications and to integrate them in order to evolve a larger computing system.
- **PSO 3:** Apply appropriate techniques, resources, and modern engineering and IT tools to address societal, health, safety, legal, and cultural issues.
- PSO 4: To analyze and assess various functional and technical security challenges in protecting various digital assets and infrastructure in the internet era and to design and develop innovative technological solutions for the same

PSOs have to be attained by the students in due course of the two years program either as part of their Core, Discipline Specific Electives, Tools and techniques or as part of their various levels of seminar/ internship and project work.

## 5. Mapping between PEOs, POs and PSOs

The following Table lists the relationships between the PEOs, POs. and PSOs. The attainment of POs can be viewed as a strategy for attaining the PEOs. Each PEO is supported by multiple POs to ensure strength in compliance. Also, the relationship between individual PO and PEOs can vary between **Reasonable** (1) and **Strong** (3).

| DEOg |   |   |   |   |   |   | POs |   |   |    |    |    |   | PS | Os |   |
|------|---|---|---|---|---|---|-----|---|---|----|----|----|---|----|----|---|
| PEOs | 1 | 2 | 3 | 4 | 5 | 6 | 7   | 8 | 9 | 10 | 11 | 12 | 1 | 2  | 3  | 4 |
| PEO1 | 2 | 2 | 3 | 3 | 2 | 2 | 1   | 1 | 2 | 1  | 1  | 2  | 2 | 1  | 1  | 2 |
| PEO2 | 2 | 2 | 3 | 1 | 3 | 3 | 1   | 1 | 2 | 1  | 2  | 1  | 2 | 2  | 3  | 1 |
| PEO3 | 2 | 3 | 2 | 3 | 3 | 2 | 1   | 1 | 3 | 2  | 1  | 2  | 1 | 3  | 1  | 2 |
| PEO4 | 3 | 2 | 2 | 1 | 3 | 1 | 1   | 1 | 3 | 2  | 2  | 2  | 3 | 2  | 1  | 3 |

- 1 Reasonable
- 2-Significant
- 3 Strong

#### 6. Course Outcomes (COs)

Course Outcomes are narrower statements that describe what students are expected to know and be able to do at the end of the course. Course outcomes are defined for all courses as part of the syllabus for the course and are measured through performance on assignments, written and oral presentation reports related to individual and team projects and through the mid-term and semester end examinations. Detailed syllabi for each course associated with Course Objectives and Course Outcomes has been for specific outcomes associated with the course. Attaining the COs is at the heart of the educational activity. If COs of individual courses are successfully attained and the curriculum has been designed to achieve the Program Outcomes, then attainment of the POs is also ensured. An effective Assessment Plan has been devised to meet the objective, quantitative and independent measures to demonstrate that all POs and PEOs are being attained by the program.

#### 7. Continuous Quality Improvement and Assessment Plan

The purpose of the Assessment Plan is to ensure attainment of all Program Outcomes (POs) and also the attainment of the Program Educational Objectives (PEOs) and to independently confirm that the POs and PEOs are being attained. Periodic monitoring of progress allows faculty members and the leadership to take corrective actions where the POs and PEOs are not meeting established targets. The process consists of assessing and evaluating the extent to which the student outcomes are being attained. The results of these assessments and evaluations are subsequently used as the primary inputs for making improvements to the program.

|                                     | ■ Familiarization to Dept./Branch & Innovations                         |  |  |  |  |  |  |

## Schedule

The activities during the Induction Program would have an Initial Phase, a Regular Phase and a Closing Phase. The Initial and Closing Phases would be two days each.

#### **Initial Phase**

| Time                | Activity Activity   |
|---------------------|---|
| Day 0               |   |
| Whole day           | Students arrive - Hostel allotment. (Preferably do pre-allotment)                 |
| Day 1               |   |
| 09:00 am - 03:00 pm | Academic registration   |
| 04:30 pm - 06:00 pm | Orientation   |
| Day 2               |   |
| 09:00 am - 10:00 am | Diagnostic test (for English etc.)  |
| 10:15 am - 12:25 pm | Visit to respective depts.  |
| 12:30 pm - 01:55 pm | Lunch   |
| 02:00 pm - 02:55 pm | Director's address  |
| 03:00 pm - 05:00 pm | Interaction with parents  |
| 03:30 pm - 05:00 pm | Mentor-mentee groups - Introduction within group. (Same as Universal Human Values |
|                     | groups)   |

#### Regular Phase

After two days is the start of the Regular Phase of induction. With this phase there would be regular program to be followed every day.

#### 3.2.1 Daily Schedule

Some of the activities are on a daily basis, while some others are at specified periods within the Induction Program. We first show a typical daily timetable.

| Sessn.        | Time                | Activity                               | Remarks |
|---------------|---------------------|--|---------|
| Day 3 onwards |                     |  |         |
|               | 06:00 am            | Wake up call                           |         |
| I             | 06:30 am - 07:10 am | Physical activity (mild exercise/yoga) |         |
|               | 07:15 am - 08:55 am | Bath, Breakfast, etc.                  |         |
| II            | 09:00 am - 10:55 am | Creative Arts / Universal Human Values |         |

|     |                     | Half the groups do Creative Arts      |
|-----|---------------------|---------------------------------------|
| III | 11:00 am - 12:55 pm | Universal Human Values /              |
|     |                     | Creative Arts Complementary alternate |
|     | 01:00 pm - 02:25 pm | Lunch                                 |
| IV  | 02:30 pm - 03:55 pm | Afternoon Session See below.          |
| V   | 04:00 pm - 05:00 pm | Afternoon Session See below.          |
|     | 05:00 pm - 05:25 pm | Break / light tea                     |
| VI  | 05:30 pm - 06:45 pm | Games / Special Lectures              |
|     | 06:50 pm - 08:25 pm | Rest and Dinner                       |
| VII | 08:30 pm - 09:25 pm | Informal interactions (in hostels)    |
|     |                     |                                       |

Sundays are off and Saturdays have the same schedule as above or have outings.

#### Afternoon Activities (Non-Daily)

The following five activities are scheduled at different times of the Induction Program, and are not held daily for everyone:

- 1. Familiarization to Dept./Branch & Innovations
- 2. Visits to Local Area
- 3. Lectures by Eminent People
- 4. Literary
- 5. Proficiency Modules

Here is the approximate activity schedule for the afternoons (may be changed to suit local needs):

| Activity              |                         | Session  | Remarks   | 3   |  |
|-----------------------|-------------------------|--|-----------|---|--|
| Familiarization with  | Dept/Branch             |  |           |   |  |
| & Innovations         |                         | IV   |           | For 3 days (Day 3 to 5)                               |  |
| Visits to Local Area  |                         | IV, V an   | d VI      | for 3- days   |  |
|                       |                         |  |           | For 3 days - interspersed (e.g., 3 Saturdays)         |  |
| Lectures by Eminent   | People                  | IV   |           | As scheduled - 3-5 lectures                           |  |
| Literary (Play / Book | k Reading / Lecture)    | IV   |           | For 3-5 days  |  |
| Proficiency Modules   | 3                       | V  |           | Daily, but only for those who need it                 |  |
| <b>Closing Phase</b>  |                         |  |           |   |  |
| Time                  | Activity                | ,  |           |   |  |
| Last But One Day      |                         |  |           |   |  |
| 08:30 am - 12 noon    | Discuss                 | scussions and finalization of presentation within each group |           |   |  |
| 02:00 am - 05:00 pm   | n Presenta              | ation by ea  | ach group | o in front of 4 other groups besides their own (about |  |
|                       | 100 stud                | lents)   |           |   |  |
| Last Day              |                         |  |           |   |  |
| Whole day Ex          | aminations (if any). Ma | y be expa  | inded to  | last 2 days, in case needed.                          |  |

## Semester – I

|             |                                   |                                    | Marks                  |                  |       |       |         |

#### Prerequisite(s): Algorithm Design

#### **Course Objectives:**

- 1. To learn an appropriate strategy to solve a problem.
- 2. To devise algorithms by choosing appropriate data structures.
- 3. To design and analyze the implementation of algorithms and data structures for different kinds of problems.
- 4. To gain knowledge about the inherent structure/hardness of a problem.

#### **Course Outcomes (CO):**

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)                     |
|-----------------|---|--|
| CO <sub>1</sub> | Understand the Programming Problem Statements for Algorithms.                   | $PO_1, PO_2, PO_4$                                   |
| CO <sub>2</sub> | Understand the necessary mathematical abstraction to solve problems.            | PO <sub>2</sub> , PO <sub>4</sub>                    |
| CO <sub>3</sub> | Analyze the Efficiency and Proofs of Correctness in Algorithms                  | PO <sub>3</sub> , PO <sub>5</sub>                    |
| CO <sub>4</sub> | Comprehend and select algorithm design approaches in a problem-specific manner. | PO <sub>4</sub> , PO <sub>9</sub> , PO <sub>12</sub> |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

#### 1 - Reasonable; 2 - Significant; 3 - Strong

#### **Detailed Contents:**

| Unit: 1 | Introduction to algorithms, Growth of functions, Master's Theorem, Sorting: Quick Sort, Heap Sort, Shaker Sort, and Counting Sort.   |
|---------|--|
| Unit: 2 | Greedy Method: Minimum Spanning Tree-Prim's Algorithm, Tarjan's Algorithm, Introduction to Dynamic programming, principle of optimality, Single Source Shortest Path-Bellman-Ford Algorithm, All Pairs Shortest Paths Algorithm-Johnson's Algorithm, Longest Common Sequence (LCS), Chained Matrix Multiplication, Huffman's code. |
| Unit: 3 | String Matching: Introduction to String Matching, application of string matching, Naivealgorithm, Rabin-Karp algorithm, Knuth Morris-Pratt algorithm, Boyer-Moore Algorithm.   |
| Unit: 4 | NP-Hard and NP-Complete problems: Basic Concepts, Non-Deterministic Algorithms, NP-Hard and NP-Complete Classes, Cook's theorem. Randomized Algorithms   |
| Unit: 5 | Introduction to parallel algorithms. Parallel Algorithm- Analysis, models, Parallel Random Access Machines (PRAM), Parallel Algorithm Structure, Parallel Algorithms for Sorting, Searching, and Merging.  |

**Examination and Evaluation Pattern:** It includes both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation, etc., and external evaluation (70 marks), which is mainly end semester examination.

#### Prerequisite(s): Computer Organization

#### **Course Objectives:**

- 1. To provide knowledge of the Parallelism concepts in Programming
- 2. To provide an elaborate idea about the different memory systems and buses.
- 3. To introduce the advanced processor architectures to the students.
- 4. To acquaint the students with the importance of multiprocessor and multicomputer.

#### Course Outcomes (CO):

| COs No.         | Statement  | Mapped Program<br>Outcomes (POs)  |  |  |
|-----------------|--|-----------------------------------|--|--|
| CO <sub>1</sub> | Understand the concepts of parallel computer models, pipeline and its hazards.         | PO <sub>1</sub> , PO <sub>2</sub> |  |  |
| CO <sub>2</sub> | Explain the concepts of parallel computing and hardware technologies.                  | PO <sub>2</sub> , PO <sub>3</sub> |  |  |
| CO <sub>3</sub> | Understand the concept and importance of Memory Hierarchy, mapping techniques.         | PO <sub>3</sub> , PO <sub>4</sub> |  |  |
| CO <sub>4</sub> | Comprehend Scalable Architectures, Pipelining, Superscalar processors, multiprocessors | PO <sub>4</sub> , PO <sub>5</sub> |  |  |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

Mapping of course outcomes with program outcomes

| CO <sub>3</sub>    |                 |                 | 3               | 2               |                 |                 |                 |                 |                 |                  |                  |                  |  |  |
| CO <sub>4</sub>    |                 |                 |                 | 2               | 3               |                 |                 |                 |                 |                  |                  |                  |  |  |

#### 1 – Reasonable; 2 – Significant; 3 – Strong

#### **Detailed Contents:**

| Unit: 1 | Review of Basic Organization and Architectural Techniques: RISC processors, Characteristics of RISC processors, RISC Vs CISC, Classification of Instruction Set Architectures Review of performance measurements, Basic parallel processing techniques: Instruction level, thread level and process level, Classification of parallel architectures.                                     |  |  |  |  |  |  |  |
|---------|--|--|--|--|--|--|--|--|
| Unit: 2 | Instruction Level Parallelism: Basic concepts of pipelining, Arithmetic pipelines, Instruction pipelines, Hazards in a pipeline: structural, data, and control, Hazards, Overview of hazard resolution techniques, Dynamic instruction scheduling, Branch prediction techniques, Instruction-level parallelism using software approaches, Superscalar techniques, Speculative execution. |  |  |  |  |  |  |  |
| Unit: 3 | Memory Hierarchies: Basic concept of hierarchical memory organization, Main memories, Cache design and implementation, Virtual memory design and implementation, Secondary technology.   |  |  |  |  |  |  |  |
| Unit: 4 | Thread Level Parallelism: Centralized vs. distributed shared memory, Interconnection topologies, Multiprocessor architecture, Symmetric multiprocessors, Cache coherence problem, Synchronization, Memory consistency, Multicore architecture, Review of modern multiprocessors.   |  |  |  |  |  |  |  |
| Unit: 5 | Process Level Parallelism: Distributed computers, Clusters, Grid, Mainframe computers. Peripheral Devices: Bus structures and standards, Synchronous and asynchronous buses, Types and uses of storage devices, Interfacing I/O to the rest of the system, Reliability and availability, I/O system design, Platform architecture.   |  |  |  |  |  |  |  |

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

#### **Prerequisite(s):** No specific prerequisite

#### **Course Objectives:**

- 1. To understand research problem and scientific approaches applied for the same
- 2. To design experiments and to analyze results of the experiments
- 3. To prepare technical reports and research papers
- 4. To understand the need of IPR to be promoted among students in general & engineering in particular.

#### **Course Outcomes (CO):**

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)  |
|-----------------|---|---|
| CO <sub>1</sub> | Illustrate the research objectives and construct research problem scientifically  | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>9</sub> ,<br>PO <sub>12</sub> |
| CO <sub>2</sub> | Apply the systematic approach to achieve research objectives and analyses results | PO <sub>4</sub> , PO <sub>8</sub> , PO <sub>9</sub>                       |
| CO <sub>3</sub> | Explain the self-written research papers and defend in review committee           | PO <sub>4</sub> , PO <sub>6</sub> , PO <sub>12</sub>                      |
| CO <sub>4</sub> | Develop Reports and files   | PO <sub>6</sub> , PO <sub>12</sub>  |

 $PO_{1}$ - Engineering Knowledge,  $PO_{2}$ - Problem analysis,  $PO_{3}$ - Design/development of solutions,  $PO_{4}$ - Conduct investigations of complex problems,  $PO_{5}$ - Modern tool usage,  $PO_{6}$ - The engineer and society,  $PO_{7}$ - Environment and sustainability,  $PO_{8}$ - Ethics,  $PO_{9}$ - Individual or team work,  $PO_{10}$ - Communication,  $PO_{11}$ - Project management and finance,  $PO_{12}$ - Life-long Learning

#### Prerequisite(s): Algorithm Design

#### **Course Objectives:**

- 1. To practice with programming skill and improve the programming logic.
- 2. To understand the complexity of algorithms.
- 3. To develop skills to apply appropriate data structures and algorithms in problem solving
- 4. To Design and analyze implementations of algorithms and data structures for different kinds of problems

#### **Course Outcomes (CO):**

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)                     |
|-----------------|---|--|
| CO <sub>1</sub> | Apply the Programming Problem Statements for Algorithms.              | $PO_1, PO_2, PO_4$                                   |
| CO <sub>2</sub> | Apply the necessary mathematical abstraction to solve problems.       | $PO_2$ , $PO_4$                                      |
| CO <sub>3</sub> | Analyze the Efficiency and Proofs of Correctness in Algorithms        | PO <sub>3</sub> , PO <sub>5</sub>                    |
| CO <sub>4</sub> | Demonstrate algorithm design approaches in a problem specific manner. | PO <sub>4</sub> , PO <sub>9</sub> , PO <sub>12</sub> |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

1 – Reasonable; 2 – Significant; 3 – Strong

#### **Detailed Contents:**

- i. Sort a given set of n integer elements using the Quick Sort method and compute its time complexity. Run the program for varied values of n > 5000 and record the time taken to sort. Plot a graph of the time taken versus n on a graph sheet. The elements can be read from a file or can be generated using the random number generator. Demonstrate using C/C++/Java/Python how the divide and conquer method works, along with its time complexity analysis: worst case, average case, and best case.
- ii. Write the Program to implement the following Sorting Algorithms:
  - a) Heap Sort
  - b) Shaker Sort
  - c) Counting Sort
- iii. Write the program to implement the Minimum Spanning Tree:
  - a) Prim's Algorithm
  - b) Tarjan's Algorithm
- iv. Write a program to implement the Bellman-Ford Algorithm
- v. Write a program to implement the Matrix Chain Multiplication.
- vi. Write a program to implement the Longest Common Sequence (LCS) problem.
- vii. Write the Program to implement the following Pattern Matching Algorithms:
  - a) Naive algorithm
  - b) Rabin-Karp algorithm
  - c) Knuth-Morris-Pratt algorithm
  - d) Boyer-Moore Algorithm

**Examination and Evaluation Pattern:** It includes both internal evaluation (50 marks) comprising two class sessional exams/assignments/quiz/ seminar presentation, etc. and external evaluation (50 marks), which is mainly end semester examination.

## **Detailed Contents:**

General characteristics of the human brain, Introduction to Biological Neural Networks, Nerve structure and synapse, Basic concepts of Neural Networks, Characteristics of Neural Unit: 1 Networks, Terminologies, Applications of the artificial neural networks. Structure of a neural net (topology), Directed graphs, Models of Neuron, Neural Network Architectures, Artificial Neuron, Activation functions, Threshold function, Piecewise linear Unit: 2 function, Sigmoidal function, Supervised learning, Unsupervised learning, Re-enforcement Learning. Knowledge Representation, Artificial Intelligence, learning rules, Error correction learning, Memory based learning, Hebbian learning, Competitive learning, Boltzmann learning, single Unit: 3 layer perceptron, Multilayer perceptron, Back propagation, Recurrent networks, Network pruning. Adaptive networks, Supervised Learning Neural Networks, Decision-based neural networks, Hierarchical neural networks, Probabilistic neural network, Radial basis function networks, Unit: 4 Comparision of RBF Networks and multilayer perceptron. Classification of linearly separable patterns, Boltzmann machine, Sigmoid Belief Networks, Helmholtz machine, Support vector machines, Self-organization maps, Genetic Algorithms, Unit: 5 Optimization, Prediction Systems, speech and decision-making.

Examination and Evaluation Pattern: It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

#### **Prerequisite(s):** Computer Networks

#### **Course Objectives:**

- 1. Understanding IoT and the role of the Cloud in IoT.
- 2. Understanding IoT development platform like Arduino, Raspberry Pi.
- 3. Understanding IoT Sensors and ThingSpeak.
- 4. Create IoT applications.

#### **Course Outcomes (CO):**

| COs No.         | Statement   | Mapped Program                                      |
|-----------------|---|---|
|                 |   | Outcomes (POs)                                      |
| CO <sub>1</sub> | Understand core concept of IoT development.             | PO <sub>1</sub>                                     |
| CO <sub>2</sub> | Understand the concept of Sensors, Actuators and Cloud. | $PO_1, PO_2$  |
| CO <sub>3</sub> | Understand and create the data acquisition on cloud     | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>4</sub> |
| CO <sub>4</sub> | Create the IoT applications                             | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>5</sub> |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

1 - Reasonable; 2 - Significant; 3 - Strong

#### **Detailed Contents:**

- 1. Study and Install IDE of Arduino and different types of Arduinos.
- 2. Write program using Arduino IDE for Blink LED.
- 3. Write Program for RGB LED using Arduino.
- 4. Study the Temperature sensor and Write Program for monitor temperature using Arduino.
- 5. Study and Implement RFID, NFC using Arduino.
- 6. Study and implement MQTT protocol using Arduino.
- 7. Study and Configure Raspberry Pi.
- 8. WAP for LED blisnk using Raspberry Pi
- 9. Study and Implement Zigbee Protocol using Arduino / Raspberry Pi.
- 10. To understand what is cloud, its importance, usage, services and types of Cloud.
- 11. To familiarize with ThingSpeak and understand the procedure of creation of a Channel over ThingSpeak.
- 12. To upload DHT11 sensor data to ThingSpeak channel through Raspberry pi2.
- 13. To upload Light sensor (TSL) data to ThingSpeak channel through Raspberry pi2
- 14. To read Light Sensor data from ThingSpeak channel and store it into database through Raspberry pi2.

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

Prerequisite(s): Knowledge of basic data science algorithms.

#### **Course Objectives:**

- 1. To understand the basic concepts and techniques of machine learning through python programming.
- 2. To develop skills of using recent machine learning packages for solving practical problems.
- 3. To gain experience of doing independent study and research.
- 4. To design and implement Machine learning Algorithms.

#### Course Outcomes (CO):

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)                                      |

1 - Reasonable; 2 - Significant; 3 - Strong

#### **Detailed Contents:**

#### Lab experiments are based on the syllabus prescribed for Machine learning algorithm using python.

- 1. Basic data structures and operations of python programming.
- 2. Write the python code for data cleaning the data (Note: Don't import repackage in python)
- 3. Write the python code for finding the Euclidean distance between two data points.
- 4. Write a python code for handling the missing value feature in the provided data set.
- 5. Implementation of k-nearest neighbors (KNN) algorithm to classify the iris data set. Print both correct and wrong predictions. Python ML library classes can be used for this problem.
- 6. Implement the classification problem, training and testing data can be used to build classification models.
- 7. Implement the class of accuracy metrics for classification: precision, recall, f1 score, accuracy score.
- 8. Implementation of K -Means algorithm.
- 9. Implementation of Decision Tree-based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
- 10. Implementation of the Random Forest algorithm.
- 11. Implementation of Naive Bayesian classifier for a sample training data set stored as a.CSV file. Compute the accuracy of the classifier, considering few test data sets.
- 12. Implementation of Simple Linear Regression using sklearn.
- 13. Implementation of regression using ordinary least squares method.
- 14. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.
- 15. Implementation of Different multi-class SVM techniques using Binary class SVM library.
- 16. Case study: Predicting the price of pre-owned cars, Classifying personal income.
- 17. Implementation of CNN using Tensorflow/Keras library and classify the Images (Note: Take your own dataset of your choice).
- 18. Implementation of Grid search and Random search using Logistic Regression.

Examination and Evaluation Pattern: It include both internal evaluation (50 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (50 marks) which is mainly end semester examination.

1 – Reasonable; 2 – Significant; 3 – Strong

#### **Detailed Contents:**

• Based on real-time/ in-house/ problem specific

\*Students are encouraged to go to Industrial Training/Internship for at least 2-3 months during semester break. They need to make a prototype model in the allotted areas on the recommendations of the supervisor.

**Examination and Evaluation Pattern:** It include both internal evaluation (50 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (50 marks) which is mainly end semester examination.

#### Prerequisite(s):

#### **Course Objectives:**

- 1. To understand the research issues & challenges, research goals, scientific methods.
- 2. To Review Literature and Research Papers; Writing Research Papers, Thesis, Reports and Project Proposals Plagiarism and Copyrights.

#### **Course Outcomes (CO):**

#### **Prerequisite(s):** Network Security

#### **Course Objectives:**

- 1. To understand the concept of security and privacy.
- To understand various protocols for network security to protect against the threats in the networks.
- 3. To understand E-mail security, PEM& S/MIME, PGP, Firewalls.
- 4. To introduce new developing security features.

#### Course Outcomes (CO):

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)  |
|-----------------|---|---|
| CO <sub>1</sub> | Understand the developing security features in networking systems and real time communication security. | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>4</sub> ,<br>PO <sub>5</sub> , PO <sub>10</sub> ,<br>PO <sub>12</sub> |
| CO <sub>2</sub> | Implement various networking protocols.   | PO <sub>3</sub> , PO <sub>4</sub>   |
| CO <sub>3</sub> | Apply research in the emerging areas of cryptography and network security.                              | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>5</sub>   |
| CO <sub>4</sub> | Analyze and protect any network from the threats in theworld.   | PO <sub>6</sub> , PO <sub>9</sub> , PO <sub>12</sub>  |

 $PO_{1}$ - Engineering Knowledge,  $PO_{2}$ - Problem analysis,  $PO_{3}$ - Design/development of solutions,  $PO_{4}$ - Conduct investigations of complex problems,  $PO_{5}$ - Modern tool usage,  $PO_{6}$ - The engineer and society,  $PO_{7}$ - Environment and sustainability,  $PO_{8}$ - Ethics,  $PO_{9}$ - Individual or team work,  $PO_{10}$ - Communication,  $PO_{11}$ - Project management and finance,  $PO_{12}$ - Life-long Learning

| CO <sub>4</sub>    |                 |                 |                 |                 |                 | 1               |                 |                 | 2               |                  |                  | 2                |

#### 1 – Reasonable; 2 – Significant; 3 – Strong

| <b>Detailed Contents:</b> |   |
|---------------------------|---|
| Unit: 1                   | Introduction to the concepts of Security: The need for security, security approaches, principles of security, modular arithmetic, prime numbers, relative prime numbers, Euler's function, Symmetric Cryptography: Overview of symmetric cryptography, Algorithm types and Modes, International Data Encryption, Algorithm (IDEA), Advanced Encryption Standard (AES) |
| Unit: 2                   | Asymmetric Cryptography: Overview of asymmetric cryptography, Robin algorithm, ElGamal Algorithm, Knapsack Algorithm, Elliptic Curve Cryptography.  |
| Unit: 3                   | Identity Based Cryptography: Introduction, Boneh-Franklin IBE (BF-IBE), Sakai-Kasahara IBE (SK-IBE), Boneh-Boyen IBE, (BB-IBE)  |
| Unit: 4                   | Public Key Infrastructure: Digital Certificates, Key Management. Hash Functions, Digital Signature, Message Integrity, Message Authentication, Entity Authentication  |
| Unit: 5                   | Security at the Application Layer: Email, PGP. Security at the Transport Layer: SSL and TLS. Security at the Network Layer: IPSec. System Security: Malicious Programs, IDS, Firewalls.   |

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

Prerequisite(s): Database Management System

#### **Course Objectives:**

- 1. To understand principles and foundations of distributed databases.
- 2. To learn concepts related to architecture, design issues, integrity control, query processing.
- 3. To understand the concept of a database transaction and related database facilities, including concurrency control, backup and recovery.
- 4. To interpret the modeling symbols for the most popular ER modeling tools. And real-world database design which often involves conflicting goals.

**Course Outcomes (CO):** 

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)   |
|-----------------|---|--|
| CO <sub>1</sub> | Understand and successfully apply logical database design principles, including E-R diagrams and database normalization.                                | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>3</sub> ,<br>PO <sub>4</sub> |
| CO <sub>2</sub> | Design and implement a small distributed database project.  | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>9</sub>                      |
| CO <sub>3</sub> | Understand the modeling symbols for the most popular ER modeling tools in context to real-world database design which often involves conflicting goals. | PO <sub>2</sub> , PO <sub>3</sub> ,PO <sub>4</sub> ,<br>PO <sub>9</sub>  |
| CO <sub>4</sub> | Apply optimization, transactions, and concurrency control in distributed environment  | PO <sub>1</sub> , PO <sub>11</sub> , PO <sub>12</sub>                    |

 $PO_{1}$ - Engineering Knowledge,  $PO_{2}$ - Problem analysis,  $PO_{3}$ - Design/development of solutions,  $PO_{4}$ - Conduct investigations of complex problems,  $PO_{5}$ - Modern tool usage,  $PO_{6}$ - The engineer and society,  $PO_{7}$ - Environment and sustainability,  $PO_{8}$ - Ethics,  $PO_{9}$ - Individual or team work,  $PO_{10}$ - Communication,  $PO_{11}$ - Project management and finance,  $PO_{12}$ - Life-long Learning

Mapping of course outcomes with program outcomes

1 – Reasonable; 2 – Significant; 3 – Strong

**Detailed Contents:** 

| Unit: 1 | Introduction: Distributed Data Processing, what is a Distributed Database System? Promises of DDBSs Problem Areas. advantages and disadvantages of distributed database, additional functions of Distributed database, distributed DBMS,  |
|---------|---|
| Unit: 2 | Distributed DBMS Architecture: DBMS Standardization, Architectural Models for Distributed DBMSs, Distributed DBMS Architecture. Distributed Database Design: Alternative Design Strategies, Distribution Design Issues, Fragmentation, Replication, Replication Techniques, Fragmentation schema, allocation schema data replication. |
| Unit: 3 | Overview of Query Processing: Query Processing Problem, Objectives of Query Processing, Complexity of Relational Algebra Operations, Layers of Query Processing. Query Decomposition and Optimization: Query Decomposition, Query Optimization, Centralized Query Optimization, Semi joins Distributed Query Optimization Algorithms. |
| Unit: 4 | Transaction Management and Concurrency Control: Definition of a Transaction, properties of Transactions, Serializability Theory, Taxonomy of Concurrency Control Mechanisms, Locking-based Concurrency Control Algorithms, Timestamp-based Concurrency Control Algorithms, Deadlock Management.                                       |
| Unit: 5 | Distributed DBMS Reliability: Reliability Concepts and Measures, Failures and Fault Tolerance in Distributed Systems, Failures in Distributed DBMS, Local Reliability Protocols, Distributed Reliability Protocols.   |

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

Prerequisite(s): Data warehouse and Data Mining

#### **Course Objectives:**

- To provide with the knowledge and expertise to become a proficient data scientist.
- To Demonstrate an understanding of statistics and machine learning concepts that are vital for datascience
- 3. To Produce Python code to statistically analyses a dataset
- 4. To Critically evaluate data visualizations based on their design and use for communicating stories from data

**Course Outcomes (CO):**

**Prerequisite(s):** Database Management System & Networks

#### **Course Objectives:**

- 1. To acquaint about the Semantic Web Vision.
- 2. To Understand about XML, RDF, RDFS, OWL.
- 3. To Create and Query the Ontology.
- 4. To introduce Ontology Reasoning and Migrate from Document to Data Web.

#### **Course Outcomes (CO):**

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)   |
|-----------------|---|--|
| CO <sub>1</sub> | Understand the concepts of structure of the semantic web technology, semantics of knowledge and resource, ontology. | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>4</sub>  |
| CO <sub>2</sub> | Evaluate logic semantics and inference with OWL.  | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>5</sub> ,<br>PO <sub>8</sub> , PO <sub>9</sub> |
| CO <sub>3</sub> | Apply ontology engineering approaches in semantic applications  | PO <sub>3</sub> , PO <sub>4</sub>  |
| CO <sub>4</sub> | Understand Web graph processing for various applications such as search engine, community detection                 | PO <sub>1</sub> , PO <sub>5</sub> , PO <sub>8</sub> ,<br>PO <sub>12</sub>                  |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

**Prerequisite(s):** Data structure and algorithm

#### **Course Objectives:**

- To understand the idea of decomposing the given problem into Analysis, Design, Implementation, Testing and Maintenance phases.
- To provide an idea of using various process models in the software industry according to given circumstances
- To gain the knowledge of how Analysis, Design, Implementation,
- To test and maintain processes of a software project.

**Course Outcomes (CO):** 

| COs No.         | Statement  | Mapped Program<br>Outcomes (POs)  |
|-----------------|--|---|
| CO <sub>1</sub> | Decompose the given project in various phases of a lifecycle. Knowledge, Understand  | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>3</sub> ,<br>PO <sub>11</sub> |
| CO <sub>2</sub> | Selection of appropriate process model depending on the user requirements apply the knowledge, techniques, and skills in the development of a software product | PO <sub>2</sub> , PO <sub>5</sub> , PO <sub>6</sub> ,<br>PO <sub>11</sub> |
| CO <sub>3</sub> | Perform various life cycle activities like Analysis, Design, Implementation, Testing and Maintenance.  | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>5</sub>                       |
| CO <sub>4</sub> | Analyze various processes used in all the phases of the product.   | PO <sub>2</sub> , PO <sub>6</sub>   |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

#### **Prerequisite(s):** Discrete Mathematics

#### **Course Objectives:**

- 1. To understand the area of artificial intelligence and designing intelligent machines.
- 2. To learn thinking and intelligence in ways that enable the construction of computer systems that works in uncertain environments.
- 3. To develop the intelligent machines using various approaches.
- 4. To distinction between Conventional Systems and an Intelligent System.

#### **Course Outcomes (CO):**

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)                    |
|-----------------|---|---|
| CO <sub>1</sub> | Able to choose the appropriate representation for an AI Problem and construct in that representation. | PO <sub>1</sub> , PO <sub>2</sub>                   |
| CO <sub>2</sub> | Selection of appropriate Algorithm and implementation   | PO <sub>2</sub>                                     |
| CO <sub>3</sub> | Design and Analyze the Performance of an AI System  | PO <sub>3</sub> , PO <sub>4</sub>                   |
| CO <sub>4</sub> | To able to analyses research in artificial intelligence   | PO <sub>2</sub> , PO <sub>4</sub> , PO <sub>9</sub> |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

#### **Detailed Contents:**

|         | Introduction: Introduction to Artificial Intelligence, Foundations and History of Artificial         |
|---------|--|
| Unit: 1 | Intelligence, Applications of Artificial Intelligence, Intelligent Agents, Structure of Intelligent  |
|         | Agents. Computer vision, Natural Language Possessing.  |
|         | <b>Introduction to Search:</b> Searching for solutions, Uniformed search strategies, Informed search |
| Unit: 2 | strategies, Local search algorithms and optimistic problems, Adversarial Search, Search for          |
|         | games, Alpha - Beta pruning.   |
|         | Knowledge Representation & Reasoning: Propositional logic, Theory of first order logic,              |
| Unit: 3 | Inference in first order logic, Resolution, Unification, Forward & Backward chaining,                |
|         | Probabilistic reasoning, Utility theory, Hidden Markov Models (HMM), Bayesian Networks.              |
|         | Machine Learning: Supervised and unsupervised learning, Decision trees, Statistical learning         |
| Unit: 4 | models, learning with complete data - Naive Bayes models, Learning with hidden data - EM             |
|         | algorithm, Reinforcement learning.   |
|         | Pattern Recognition: Introduction, Design principles of pattern recognition system, Statistical      |
| TT 1. 6 | Pattern recognition, Parameter estimation methods - Principal Component Analysis (PCA) and           |
| Unit: 5 | Linear Discriminant Analysis (LDA), Classification Techniques – Nearest Neighbor (NN)                |
|         | Rule, Bayes Classifier, K-means clustering algorithms.   |

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

#### **Prerequisite(s):** Artificial Intelligence

#### **Course Objectives:**

- 1. To provide the concepts of intelligent systems.
- 2. To develop problem solving skills by searching.
- 3. To explain knowledge representation, problem solving, and reasoning.
- 4. To deal with uncertainty and design agents to handle them.

#### **Course Outcomes (CO):**

| COs No.         | Statement  | Mapped Program<br>Outcomes (POs)  |
|-----------------|--|-----------------------------------|
| CO <sub>1</sub> | Understand the characteristics, scope and limits of the intelligent systems.                         | PO <sub>1</sub> , PO <sub>2</sub> |
| CO <sub>2</sub> | Analyze the problem solving by searching   | PO <sub>2</sub> , PO <sub>3</sub> |
| CO <sub>3</sub> | Apply the knowledge representation, problem solving, and reasoning                                   | PO <sub>4</sub> , PO <sub>5</sub> |
| CO <sub>4</sub> | Analyze the reasons for uncertainty, biological inspired algorithms and design agents to handle them | PO4, PO9, PO10                    |

 $PO_1$ - Engineering Knowledge,  $PO_2$ - Problem analysis,  $PO_3$ - Design/development of solutions,  $PO_4$ - Conduct investigations of complex problems,  $PO_5$ - Modern tool usage,  $PO_6$ - The engineer and society,  $PO_7$ - Environment and sustainability,  $PO_8$ - Ethics,  $PO_9$ - Individual or team work,  $PO_{10}$ - Communication,  $PO_{11}$ - Project management and finance,  $PO_{12}$ - Life-long Learning

Mapping of course outcomes with program outcomes

#### Prerequisite(s): Artificial Intelligence

#### **Course Objectives:**

- 1. To understand the basic concept and framework of virtual reality.
- To understand the elements, architecture, input and output devices of virtual and augmented reality systems.
- 3. To explore the research issues in Augmented Reality and Virtual Reality (AR &VR).
- 4. To Understand AR environments

Prerequisite(s): Machine Learning, MATLAB

#### **Course Objectives:**

- 1. To introduce soft computing concepts and techniques and foster their abilities in designing appropriate technique for a given scenario.
- 2. To implement soft computing-based solutions for real-world problems.
- 3. To provide knowledge of non-traditional technologies and fundamentals of artificial neural networks, fuzzy logic, genetic algorithms.
- 4. To provide student hands-on experience on MATLAB to implement various strategies.

#### **Course Outcomes (CO):**

| COs No.         | Statement  | Mapped Program<br>Outcomes (POs)  |
|-----------------|--|---|
| CO <sub>1</sub> | Evaluate soft computing techniques and their roles in building intelligent machines. | PO <sub>2</sub> , PO <sub>4</sub>   |
|                 | machines.  |   |
| CO <sub>2</sub> | Apply fuzzy logic and reasoning to handle uncertainty and solve                      | PO <sub>1</sub> , PO <sub>3</sub> , PO <sub>4</sub>                       |
|                 | various engineering problems.  |   |
| CO <sub>3</sub> | Apply genetic algorithms to combinatorial optimization problems.                     | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>4</sub> ,<br>PO <sub>12</sub> |
|                 |  | 1 012   |
| CO <sub>4</sub> | Evaluate and compare solutions by various soft computing approaches for a given      | PO <sub>2</sub> , PO <sub>4</sub>   |
|                 | problem.   |   |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

Mapping of course outcomes with program outcomes

| Course<br>Outcomes | PO <sub>1</sub> | PO <sub>2</sub> | PO <sub>3</sub> | PO <sub>4</sub> | PO <sub>5</sub> | PO <sub>6</sub> | PO <sub>7</sub> | PO <sub>8</sub> | PO <sub>9</sub> | PO <sub>10</sub> | PO <sub>11</sub> | PO <sub>12</sub> |  |

#### **Prerequisite(s):** Cyber Security

#### **Course Objectives:**

- 1. Understand the concept of Cybercrime & digital forensic, digital evidence & its role.
- 2. Interpret & apply various digital forensic models.
- 3. Interpret & apply various phases of methodology on incident.
- 4. Interpret & apply digital forensic Tools in real-Time scenario.

#### Course Outcomes (CO):

| COs No.         | Statement  | Mapped Program<br>Outcomes (POs)                      |
|-----------------|--|---|
| CO <sub>1</sub> | Analyze the need for cybercrime investigation and understand the   | PO <sub>1</sub> , PO <sub>5</sub>                     |
|                 | hardware and software components responsible for seeking evidence. |   |
| CO <sub>2</sub> | Apply knowledge on the techniques used for collecting              | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>3</sub> , |
|                 | evidences.   | PO <sub>4</sub>                                       |
| CO <sub>3</sub> | Analyze the evidence through suitable tools.                       | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>5</sub> , |
|                 |  | $PO_{10}$   |
| CO <sub>4</sub> | Analyze other sources of evidences                                 | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>4</sub>   |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

Prerequisite(s): Basic networking concepts and Basic OS

#### **Course Objectives:**

- 1. To understand the overview of the principles, architectures, algorithms and programming models used in distributed systems.
- 2. To acquire the concept of distributed system design.
- 3. To gain the knowledge in synchronization, consistency and replication, fault tolerance and security.
- 4. To apply and analysis of the current popular distributed systems such as peer-to-peer (P2P) systems.

#### **Course Outcomes (CO):**

1 – Reasonable; 2 – Significant; 3 – Strong

## **Detailed Contents:**

| Unit: 1   | <b>Introduction:</b> Motivation, objectives, characterization & classification of distributed systems. Distributed system architecture. Hardware & software issues. Communication: Layered protocols, Client server protocols, RPC, group communication. Coordination, synchronization & consistency: Logical clocks, Physical clocks, mutual exclusion, election algorithms, atomic broadcast, sequential consistency transaction distributed consensus, Threads: Thread synchronization, implementation issues, and threads vs. RPC |  |  |  |  |
|---|---|--|--|--|--|
| Unit: 2   | Models of distributed computing: Client server and RPC, RPC architecture, exceptions, underlying protocols, IDL, marshalling etc. Group models and peer to peer: Groups for service replication/ reliability, groups for parallelism / performance, client/ server vs. peer-to-peer, multicast, atomic broadcast.   |  |  |  |  |
| Unit: 3  Inter-process Communication: API for Internet protocols. External data representation. Marshalling. Client-Server communication and Group communication. Distribution and Remote Invocation-Communication between distributed objects, Remote process and notifications. |   |  |  |  |  |
| Unit: 4   | <b>Distributed file system:</b> Security, Naming/ location transparency, R/W semantics, cache coherence, replication. Distributed shared memory: DSM architecture, consistency models and relation to caching, release consistency, comparison with message passing and RPC. Advanced Distributed Computing Paradigms: Message Queuing, Mobile agents, Network services, Object spaces  |  |  |  |  |
| Unit: 5   | Fault tolerant distributed systems: Introduction, dependability, faults vs. errors vs. failure, space time and value redundancy, fault tolerant architecture, failure detection algorithms, partitioning, FT consensus. Distributed multimedia system: Introduction, characteristics, and resource management stream adaptation   |  |  |  |  |

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

#### **Course Objectives:**

- To understand fundamentals of Cryptography and Cyber Security.
- To learn about how to maintain the Confidentiality, Integrity and Availability of a data.
- 3. To acquire the concept of various protocols and cryptographic algorithms for network security to protect against the threats in the networks.
- To analyze the emerging technologies in the cyber security areas and assess their current capabilities, limitations and potential applications.

**Course Outcomes (CO):** 

| COs No.         | Statement  | Mapped Program<br>Outcomes (POs)  |
|-----------------|--|-----------------------------------|

#### Prerequisite(s): Network Security Lab

#### **Course Objectives:**

- To understand and protect the network infrastructure, architecture, protocols and applications in order to deliver secured protocols, applications, services and data.
- 2. To Train the students to develop 'hands-on' skills on using tools and test beds in order.
- 3. To design network and security experiments/simulations.
- 4. To prepare the students to perform critical thinking, idea generation and implementation, and integration with existing systems when solving real research problems.

Course Outcomes (CO):

| COs No.         | Statement  | Mapped Program<br>Outcomes (POs)                     |
|-----------------|--|--|
| CO <sub>1</sub> | Demonstrate the ability to understand and synthesize the principles of network     | $PO_1, PO_2$   |
|                 | security architectures and security frameworks and models;                         |  |
| $CO_2$          | Understand Data integrity, Authentication, Digital Signatures.                     | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>5</sub>  |
| CO <sub>3</sub> | Analyze, design and manage the requirements of a secure network architecture based | PO <sub>2</sub> , PO <sub>3</sub>                    |

1 - Reasonable; 2 - Significant; 3 - Strong

#### **Detailed Contents:**

- 1. Write a Program to implement International Data Encryption Algorithm (IDEA).
- 2. Write a Program to implement Advanced Encryption Standard (AES) Algorithm.
- 3. Write a Program to implement Rabin Algorithm.
- 4. Write a Program to implement ElGamal Algorithm
- 5. Write a Program to implement Knapsack Algorithm.
- 6. Write a Program to implement Elliptic Curve Cryptography (ECC).
- 7. Write a Program to implement Digital Signature.
- 8. Write the program to implement the ID based cryptography algorithms:
  - i. Boneh-Franklin IBE (BF-IBE)
  - ii. Sakai-Kasahara IBE (SK-IBE)
  - iii. Boneh-Boyen IBE, (BB-IBE)
- 9. Study the web server's code, and find examples of code vulnerable to memory corruption through a buffer overflow. Write down a description of each vulnerability in the file

/home/httpd/lab/bugs.txt; use the format described in that file. For each vulnerability, describethe buffer which may overflow, how you would structure the input to the web server (i.e., the HTTP request) to overflow the buffer, and whether the vulnerability can be prevented using stack canaries. Locate at least 5 different/vulnerabilities.

**Examination and Evaluation Pattern:** It include both internal evaluation (50 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (50 marks) which is mainly end semester examination.

#### Prerequisite(s): Digital Electronics

#### **Course Objectives:**

- 1. Understand principles and foundations of distributed databases.
- 2. Learn concepts related to architecture, design issues, integrity control, query processing.
- 3. Understand the concept of a database transaction and related database facilities, including concurrency control, backup and recovery.
- 4. To interpret the modeling symbols for the most popular ER modeling tools. And real-world database design whichoften involves conflicting goals.

#### **Course Outcomes (CO):**

| COs No.         | Statement  | Mapped Program   |
|-----------------|--|--|
|                 |  | Outcomes (POs)   |
| CO <sub>1</sub> | Be able to apply methods and techniques for distributed query processing and optimization. | PO <sub>1</sub> , PO <sub>2</sub>  |
| CO <sub>2</sub> | Understand distributed database systems architecture and design.                           | PO <sub>3</sub> , PO <sub>4</sub>  |
| CO <sub>3</sub> | Understand the broad concepts of distributed transaction process.                          | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>5</sub>                      |
| CO <sub>4</sub> | Implement of replication in distributed database system                                    | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>5</sub> ,<br>PO <sub>9</sub> |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

1 – Reasonable; 2 – Significant; 3 – Strong

## **Detailed Contents:**

#### List of Excrement

- 1. Examine and implement of Basic database management operations and SQL queries.
- 2. Examine and implement fragmentation and its types in distributed database system.
- 3. Examine and implement materialized view.
- 4. Implement different types of joins.
- 5. Implement heterogeneous databases.
- 6. Examine and implement of replication in distributed database system.
- 7. A mini project based on Distributed Databases.

**Examination and Evaluation Pattern:** It include both internal evaluation (50 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (50 marks) which is mainly end semester examination.

#### Prerequisite(s): Object Oriented Database

#### **Course Objectives:**

- 1. To Optimize business decisions and create competitive advantage with Big Data analytics.
- 2. To Impart the architectural concepts of Hadoop and introducing map reduce paradigm.
- 3. To Develop Big Data applications for streaming data using Apache Spark.
- 4. To learn the Data Analytics

#### **Course Outcomes (CO):**

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)                     |
|-----------------|---|--|
| CO <sub>1</sub> | Understand data summarization, query, and analysis. | PO <sub>1</sub> , PO <sub>2</sub>                    |
| CO <sub>2</sub> | Apply data modelling techniques to large data sets  | PO <sub>2</sub> , PO <sub>7</sub> , PO <sub>12</sub> |
| CO <sub>3</sub> | Creating applications for Big Data analytics        | PO <sub>4</sub> , PO <sub>5</sub>                    |
| CO <sub>4</sub> | Building a complete business data analytic solution | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>5</sub>  |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

#### 1 – Reasonable; 2 – Significant; 3 – Strong

#### **Detailed Contents:**

- 1. Form setting up and Installing Hadoop in its two operating modes: ☐ Pseudo distributed, ☐ fully distributed.
- 2. Implement the following file management tasks in Hadoop:
  - i) Adding files and directories 
    Retrieving files
  - ii) Deleting files Benchmark and stress test an Apache Hadoop cluster.
- 3. Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm. ☐ Find the number of occurrences of each word appearing in the input file(s) ☐ Performing a MapReduce Job for word search count (look for specific keywords in afile)
- 4. Stop word elimination problem:
- 5. Input: o A large textual file containing one sentence per line o A small file containing a set of stop words (One stop word per line)
- 6. Output: o A textual file containing the same sentences of the large input file without the words appearing in the small file.
- 7. Write a Map Reduce program that mines weather data. Weather sensors collecting data every hour at many locations across the globe gather large volume of log data, which is a good candidate for analysis with MapReduce, since it is semi structured and record-oriented. Data availableat: <a href="https://github.com/tomwhite/hadoopbook/tree/master/input/ncdc/all">https://github.com/tomwhite/hadoopbook/tree/master/input/ncdc/all</a>.
- 8. Find average, max and min temperature for each year in NCDC data set?
- 9. Filter the readings of a set based on value of the measurement, Output the line of input files associated with a temperature value greater than 30.0 and store it in a separate file.
- 10. Install and Run Pig then write Pig Latin scripts to sort, group, join, project, and filter your data.
- 11. Write a Pig Latin scripts for finding TF-IDF value for book dataset (A corpus of eBooks available at: Project Gutenberg)
- 12. Install and Run Hive then use Hive to create, alter, and drop databases, tables, views, functions, and indexes.
- 13. Install, Deploy & configure Apache Spark Cluster. Run apache spark applications using Scala.
- 14. Data analytics using Apache Spark on Amazon food dataset, find all the pairs of items frequently reviewed together.
- 15. Write a single Spark application that: o Transposes the original Amazon food dataset, obtaining a PairRDD of the type:  $\rightarrow$  o

Counts the frequencies of all the pairs of products reviewed together; o Writes on the output folder all the pairs of products that appear more than once and their frequencies. The pairs of products must be sorted by frequency.

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

1 – Reasonable; 2 – Significant; 3 – Strong

#### **Detailed Contents:**

#### List of experiments:

- Working with XML,
- 2. Working with XML Schema, DTD
- 3. Design Of Ontology using RDF
- 4. Design RDF document with different Serialization format (e.g. tutle,N-triple)
- 5. Design Of Ontology using RDFS
- 6. Design Of Ontology using OWL
- 7. Case study: Pizza Ontology
- 8. Querying Ontology using SPARQL
- 9. Design of any domain specific Ontology in Protégé
- 10. Case Study: Dbpedia
- 11. Case study: LOD Cloud

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

#### **Prerequisite(s):** Network Security

#### **Course Objectives:**

- 1. To understand the function of Blockchain as a method of securing distributed ledgers.
- 2. To familiarize the functional/operational aspects of cryptocurrency ecosystem.
- 3. To familiarize about wallets and learn their utilization of wallet during transaction.
- 4. To understand that how to write and apply the Smart Contracts.

#### **Course Outcomes (CO):**

#### **Detailed Contents:**

Unit: 1 Dependence in Conditionals, Data Dependence in Parallel Loops, Program Dependence Graph. Scalar Analysis with Factored Use-Def Chains: Constructing Factored UseDef Chains, FUD Chains for Arrays, Induction Variables Using FUD Chains, Constant Propagation with FUD Unit: 2 Chains, Data Dependence for Scalars. Data Dependence Analysis for Arrays, Array Region Analysis, Pointer Analysis, I/O Dependence, Procedure Calls, Inter-procedural Analysis. Loop Restructuring: Simple Transformations, Loop Fusion, Loop Fission, Loop Reversal, Loop Interchanging, Loop Skewing, Linear Loop Transformations, Strip-Mining, Loop Tiling, Unit: 3 Other Loop Transformations, and Inter-procedural Transformations, Optimizing for Locality: Single Reference to Each Array, Multiple References, General Tiling, Fission and Fusion for Locality. Concurrency Analysis: Concurrency from Sequential Loops, Concurrency from Parallel Loops, Nested Loops, Round off Error, Exceptions and Debuggers. Vector Analysis: Vector Unit: 4 Code, Vector Code from Sequential Loops, Vector Code from For all Loops, Nested Loops, Round off Error, Exceptions, and Debuggers, Multi-vector Computers. Message-Passing Machines: SIMD Machines, MIMD Machines, Data Layout, Parallel Code for Array Assignment, Remote Data Access, Automatic Data Layout, Multiple Array

performance computing and message passing machines and scalable shared memory machine. Examination and Evaluation Pattern: It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

#### **Course Objectives:**

- To understand the basics of networking and the protocols used in distributed environment.
- To evaluate the impact of memory on parallel/distributed algorithm formulations.
- 3. To validate the performance of parallel/distributed algorithm.
- To gain knowledge of design and implementation of distributed algorithms.

#### Course Outcomes (CO):

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)                    |
|-----------------|---|---|
| CO <sub>1</sub> | Analyze various issues in the design and implementation of distributed computing systems. | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>3</sub> |
| CO <sub>2</sub> | Categorize the various system models, communication between client and server.            | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>4</sub> |
| CO <sub>3</sub> | Apply the knowledge of deadlock methods and its algorithms.                               | PO <sub>4</sub> , PO <sub>5</sub>                   |
| CO <sub>4</sub> | Understand the significance of distributed file system with real time applications.       | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>6</sub> |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

**Prerequisite(s):** Computer Programming and Database

#### **Course Objectives:**

- To understand natural language processing and
- To learn how to apply basic algorithms in this field of NLP.
- To get acquainted with the algorithmic description of the main language levels: morphology, syntax, semantics, and pragmatics, as well as the resources of natural language data - corpora.
- To conceive basics of knowledge representation, inference, and relations to the artificial intelligence.

Course Outcomes (CO):

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)   |
|-----------------|---|--|
| CO <sub>1</sub> | Understand natural language processing and learn how to apply basic algorithms in this field.   | PO <sub>1</sub> , PO <sub>2</sub>  |
| CO <sub>2</sub> | Understand the algorithmic description of the main language levels: morphology, syntax, semantics, and pragmatics, as well as the resources of natural language processing. | PO <sub>4</sub> , PO <sub>6</sub> , PO <sub>8</sub>  |
| CO <sub>3</sub> | Analyze language modelling and sequence tagging.  | PO <sub>2</sub> , PO <sub>4</sub> , PO <sub>6</sub> ,<br>PO <sub>7</sub> , PO <sub>8</sub> |
| CO <sub>4</sub> | Understand the design features of information retrieval systems   | PO <sub>1</sub> , PO <sub>3</sub> , PO <sub>6</sub> ,<br>PO <sub>12</sub>                  |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

| Detailed | <b>Contents:</b> |
|----------|------------------|
|          |                  |

Unit: 1

Introduction: Introduction to the Morphology, Syntax, Semantics by linking the "linguistics view" (computational linguistics) with the "artificial intelligence view" (natural language processing). Morphology: Analysis and generation of language on word level: e.g. problems with

Unit: 2

compounding and idiomatic phrases, homophonous strings as well as loan words and their processing using e.g. finite state automata as well as semantic networks. Ambiguities in words like "pen" and "pipe", but will also discuss some complex strings. Syntax: Analysis and generation of language on phrasal and sentence level: e.g. applications

such as machine translation and grammar checking and the processing using phase structure Unit: 3 grammars as well as unification-based formalisms and relating those formalisms to recursive transition networks (RTNs) as well as augmented transition networks (ATNs).

Semantics: Language ambiguities on the level of "meaning": represented by case structures and conceptual dependency structures. We will look at famous utterances such as: Colorless Unit: 4 green ideas sleep furiously. And will discuss why the machine runs into problems during analysis, and how these problems can be overcome.

Applications of NLP: Machine Translation, Grammar Checkers Dictation, Automatic Unit: 5 Document Generation, NL Interfaces.

Examination and Evaluation Pattern: It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

Prerequisite(s): Artificial Intelligence and Machine Learning

#### **Course Objectives:**

- To understand the building blocks of Quantum computers and highlight the paradigm change between conventional computing and quantum computing.
- 2. To understand entangled quantum subsystems and properties of entangled states.
- 3. To understand the Quantum state transformations and the algorithms.
- 4. To explore the applications of quantum computing.

**Course Outcomes (CO):** 

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)  |
|-----------------|---|---|
| CO <sub>1</sub> | Understand the basic principles of quantum computing.                     | $PO_1, PO_3$  |
| CO <sub>2</sub> | Analyze the knowledge of the fundamental differences                      | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>9</sub>                     |
|                 | between conventional computing and quantum computing.                     |   |
| CO <sub>3</sub> | Apply several basic quantum computing algorithms.                         | PO2, PO3, PO4   |
| CO <sub>4</sub> | Analyze the classes of problems that can be expected to be solved well by | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>4</sub> , |
|                 | quantum computers.  | PO <sub>5</sub>   |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

| <b>Detailed Contents:</b> |   |
|---------------------------|---|
| Unit: 1                   | Qubit & Quantum States: The Qubit, Vector Spaces. Linear Combination Of Vectors, Uniqueness of a spanning set, basis & dimensions, inner Products, orthonormality, gramschmidt orthogonalization, bra-ket formalism, the Cauchy-schwarez and triangle Inequalities.   |
| Unit: 2                   | Matrices & Operators: Observables, The Pauli Operators, Outer Products, The Closure Relation, Representation of operators using matrices, outer products & matrix representation, matrix representation of operators in two dimensional spaces, Pauli Matrix, Hermitian unitary and normal operator, Eigen values & Eigen Vectors, Spectral Decomposition, Trace of an operator, important properties of Trace, Expectation Value of Operator, Projection Operator, Positive Operators. |
| Unit: 3                   | Commutator Algebra, Heisenberg uncertainty principle, polar decomposition & singular values, Postulates of Quantum Mechanics.   |
| Unit: 4                   | Tensor Products: Representing Composite States in Quantum Mechanics, Computing inner products, Tensor products of column vectors, operators and tensor products of Matrices. Density Operator: Density Operator of Pure & Mix state, Key Properties, Characterizing Mixed State, Practical Trace & Reduce Density Operator, Density Operator & Bloch Vector.  |
| Unit: 5                   | Quantum Measurement Theory: Distinguishing Quantum states & Measures, Projective Measurements, Measurement on Composite systems, Generalized Measurements, Positive Operator- Valued Measures. Recent trends in Quantum Computing Research, Quantum   |

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

# Prerequisite(s): DBMS Course Objectives:

- 1. To introduce data mining principles and techniques.
- 2. To acquire the concept of critical thinking, problem solving and DECISION-MAKING skills with respect to Data warehouse and data mining.
- 3. To demonstrate various schema model and the Star Schema to design a Data Warehouse.
- 4. To apply different data mining techniques and algorithms.

#### **Course Outcomes (CO):**

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)                    |
|-----------------|---|---|
| CO <sub>1</sub> | Understand a data warehouse or data mart to present information needed by the manager and can be utilized for managing clients                                  | PO <sub>1</sub> , PO <sub>2</sub>                   |
| $CO_2$          | Demonstrate a quality data warehouse or data mart effectively and administer the data resources in such a way that it will truly meet management's requirements | PO <sub>3</sub> , PO <sub>4</sub>                   |
| CO <sub>3</sub> | Evaluate standards and new technologies to determine their potential impact on your information resource for a large complex data warehouse/data mart.          | PO <sub>4</sub> , PO <sub>9</sub>                   |
| CO <sub>4</sub> | Apply the emerging technologies in Data mining.   | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>9</sub> |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

Prerequisite(s): Knowledge of basic data science algorithms

#### **Course Objectives:**

- To learn about the purpose of Machine Learning and where it applies to the real worlds.
- To understand a range of machine learning algorithms along with their strengths and weaknesses.
- To learn methodology and tools to apply machine learning algorithms.
- To real data and evaluate their performance.

**Course Outcomes (CO):** 

| COs No.         | Statement  | Mapped Program<br>Outcomes (POs)                    |
|-----------------|--|---|
| CO <sub>1</sub> | Understand the importance of data pre-processing before machine learning modeling. | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>5</sub> |
| CO <sub>2</sub> | Ability to formulate machine learning techniques to respective problems.           | PO <sub>2</sub> , PO <sub>4</sub> , PO <sub>5</sub> |
| CO <sub>3</sub> | Performance and evaluation of learning algorithms and model selection.             | PO <sub>1</sub> , PO <sub>5</sub>                   |
| CO <sub>4</sub> | Apply machine learning algorithms to solve problems of various complexity.         | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>3</sub> |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

|                           | 1 – Reasonable; 2 – Significant; 3 – Strong   |
|---------------------------|---|
| <b>Detailed Contents:</b> |   |
| Unit: 1                   | Introduction to Machine Learning - Defining learning systems, Goals and applications of machine learning in different fields such as health care, banking, telecommunication, digital marketing and so on. Aspects of developing a learning system: training and testing data, concept representation, function approximation, a general overview of supervised, semi-supervised, unsupervised learning algorithms and the usage of each algorithm.   |
| Unit: 2                   | Basics of Python: Introduction to Python, Control structure and function: if-elif-else, while loop, for loop, break and continue, Introduction to function, Types of functions, Function arguments, Lambda functions, File Handling, packages and modules.  Python Data Structures: Lists, Tuples, Dictionary, Sets, strings, NumPy: NumPy operation, Array and its operation, Matrix and associated operations, Linear algebra and related operations using python. Understand the advantage of using Python libraries for implementing Machine Learning models. Types of data sets. |
| Unit: 3                   | Pandas data frame and data frame related operations on dataset: Reading and writing data files, pandas append, insert, replace, dropping columns from dataframe, groupby and aggregate function, join operations, Exploratory data analysis, Data preparation and preprocessing (Dealing with missing value, cross-validation, classification, performance measure). Data visualization on dataset using matplotlib and seaborn libraries: Scatter plot, Line plot, Bar plot, Histogram, Box plot, Pair plot.   |
| Unit: 4                   | Regression - Linear, Non-linear, Logistic regression and Multiple regression, and their applications.  Classification technique - KNN, ANN, Decision Trees- Minimum Description. Information Gain, Entropy, Cross Validation and different classification accuracy metrics.   |
| Unit: 5                   | Clustering approaches - Types of clustering, k-means clustering, Partitioned-based Clustering, Hierarchical Clustering, and Density-based Clustering.  Support Vector Machines: Maximum margin linear separators. Kernels for learning non-linear functions. Bayesian Learning: theory and Bayes rule. Naive Bayes learning algorithm. Parameter smoothing. Bayes nets and Markov nets for representing dependencies.   |

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

#### **Prerequisite(s):** Operating System

#### **Course Objectives:**

- 1. To provide knowledge of the main components of OS and their working.
- 2. To Introduce the concepts of process and thread and their scheduling policies.
- 3. To impart knowledge of Handling synchronization of concurrent processes and deadlocks.
- 4. To Analyze the different techniques for managing memory, I/O, disk and files.

#### **Course Outcomes (CO):**

| COs No.         | Statement  | Mapped Program  |
|-----------------|--|---|
|                 |  | Outcomes (POs)  |
| CO <sub>1</sub> | Understand the general architecture of computer system.                      | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>4</sub>                     |
| CO <sub>2</sub> | Understand, contrast and compare differing structures for operating systems. | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>6</sub> , PO <sub>8</sub> , |
|                 |  | PO <sub>9</sub>   |
| CO <sub>3</sub> | Gain proficiency needed to analyze theory and implementation of: processes,  | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>5</sub> , |
|                 | scheduling, I/O and files systems.   | PO <sub>7</sub> , PO <sub>12</sub>                                      |
| CO <sub>4</sub> | Analyze various types of operating systems including Unix/Linux and Get in-  | PO <sub>2</sub> , PO <sub>3</sub>                                       |
|                 | depth knowledge of memory management for operating systems.                  |   |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

## 1 – Reasonable; 2 – Significant; 3 – Strong

Introduction: Operating system concept - processes and threads, process model, process creation, process termination, process hierarchies, and process states, Implementation of

Management- I/O Channels, Interrupts and Interrupt Handling, Types of device allocation.

# **Detailed Contents:**

Unit: 1

processes, Threads- Thread model, thread usage, Implementation of threads in user space and kernel, Hybrid implementations

Inter Process Communication: Race conditions, critical regions, Mutual Exclusion with busy waiting, sleep and wakeup, Semaphores, Mutexes, Monitors, Message passing; Scheduling: scheduling in batch systems, Interactive systems, Real time systems, Thread scheduling.

Deadlocks: Introduction, Deadlock Detection and Recovery – Deadlock Detection with one resource of each type, with multiple resource of each type, recovery from deadlock; Deadlock Avoidance, Deadlock Prevention.

Memory and Device Management: Introduction, Swapping, Paging, Virtual memory – Demand paging, page replacement Algorithms; File System Management- Organization of File System, File Permissions, MS DOS and UNIX file system case studies, NTFS; Device

Unit: 5

Distributed Operating Systems: Distributed operating system concept – Architectures of Distributed Systems, Distributed Mutual Exclusion, Distributed Deadlock detection, Agreement protocols, Threads, processor Allocation, Allocation algorithms, Distributed File system design; Real Time

Operating Systems: Introduction to Real Time Operating Systems, Concepts of scheduling,

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

#### **Course Objectives:**

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To Understand image restoration and image compression procedures.
- To Analyze and identify different feature extraction techniques for image analysis and recognition.
- To introduce segmentation and morphological processing techniques.

#### **Course Outcomes (CO):**

| COs No.         | Statement  | Mapped Program                                       |
|-----------------|--|--|
|                 |  | Outcomes (POs)                                       |
| CO <sub>1</sub> | Understand the basics of image processing enhancement techniques such as | PO <sub>1</sub> , PO <sub>4</sub> , PO <sub>6</sub>  |
|                 | Image formation and transformation using sampling and quantization.      |  |
| CO <sub>2</sub> | Apply the mathematical modelling of image restoration and compression    | PO2, PO3, PO4, PO5                                   |
|                 | techniques.  |  |
| CO <sub>3</sub> | Comprehend image compression standards by image                          | PO <sub>1</sub> , PO <sub>3</sub> , PO <sub>4</sub>  |
|                 | segmentation and representation techniques.                              |  |
| CO <sub>4</sub> | Analyze and apply compression and coding techniques used for Image data. | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>12</sub> |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO10- Communication, PO11- Project management and finance, PO12- Life-long Learning

#### Prerequisite(s): Mathematics

#### **Course Objectives:**

- To Understand the wireless/mobile market and the future needs and challenges.
- 2. To acquaint with key concepts of wireless networks, standards, technologies and their basic operations.
- 3. To analyze and design various medium access.
- 4. To demonstrate the applications.

#### **Course Outcomes (CO):**

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)                                      |
|-----------------|---|---|
| CO <sub>1</sub> | Apply advanced knowledge of networking and wireless networking and understand various types of wireless networks, standards, operations and use Cases | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>6</sub>                   |
| CO <sub>2</sub> | Analyze and design WLAN, WPAN, WWAN, Cellular based upon under lying propagation and performance analysis.  | PO <sub>1</sub> , PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>9</sub> |
| CO <sub>3</sub> | Create and Design wireless networks exploring trade-offs between wire line and wireless links.  | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>10</sub>                  |
| CO <sub>4</sub> | Analyze and develop mobile applications to solve some of the real-world problems.   | PO <sub>3</sub> , PO <sub>5</sub> , PO <sub>12</sub>                  |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

Mapping of course outcomes with program outcomes

#### 1 - Reasonable; 2 - Significant; 3 - Strong

## **Detailed Contents:**

Introduction: Wireless Networking Trends, Key Wireless Physical Layer Concepts, Multiple Access Technologies -CDMA, FDMA, TDMA, Spread Spectrum technologies, Frequency reuse, Radio Propagation and Modelling, Challenges in Mobile Computing: Resource poorness, Bandwidth, energy etc. Wireless Local Area Networks: IEEE 802.11 Wireless Unit: 1 LANs Physical & MAC layer, 802.11 MAC Modes (DCF & PCF) IEEE 802.11 standards, Architecture & protocols, Infrastructure vs. Adhoc Modes, Hidden Node & Exposed **Terminal** Problem, Problems, Fading Effects in Indoor and outdoor WLANs, WLAN Deployment Wireless Cellular Networks: 1G and 2G, 2.5G, 3G, and 4G, Mobile IPv4, Mobile IPv6, TCP over Wireless Networks, Cellular architecture, Frequency reuse, Channel assignment Unit: 2 strategies, Handoff strategies, Interference and system capacity, Improving coverage and capacity in cellular systems, Spread spectrum Technologies. WiMAX (Physical layer, Media access control, Mobility and Networking), IEEE 802.22 Wireless Regional Area Networks, IEEE 802.21 Media Independent Handover Overview Unit: 3 Wireless Sensor Networks: Introduction, Application, Physical, MAC layer and Network Layer, Power Management, Tiny OS Overview. Wireless PANs: Bluetooth AND Zigbee, Introduction to Wireless Sensors. Security: Security Unit: 4 in wireless Networks Vulnerabilities, Security techniques, Wi-Fi Security, DoS in wireless communication. Advanced Topics: IEEE 802.11x and IEEE 802.11i standards, Introduction to Vehicular Unit: 5 Adhoc Networks, Opportunistic Networks.

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

**Prerequisite(s):** Computer Networks

#### **Course Objectives:**

- To introduce soft computing concepts and techniques and foster their abilities in designing appropriate technique for a given scenario.
- 2. To implement soft computing-based solutions for real-world problems.
- 3. To give students knowledge of non-traditional technologies and fundamentals of artificial neural networks, fuzzy sets, fuzzy logic, genetic algorithms.
- 4. To provide student hands-on experience on MATLAB to implement various strategies.

**Course Outcomes (CO):** 

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)  |
|-----------------|---|---|
| CO <sub>1</sub> | Understand the fundamentals, frameworks, of mobile application Platforms including iOS, Android, and PhoneGap.          | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>10</sub>  |
| CO <sub>2</sub> | Analyze the target platform and users and be able to define and sketch of a mobile application.                         | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>5</sub>   |
| CO <sub>3</sub> | Analyze, Design and develop a mobile application prototype in one of the platforms (challenge project).                 | PO <sub>3</sub> , PO <sub>5</sub> , PO <sub>9</sub> , PO <sub>11</sub>                      |
| CO <sub>4</sub> | Analyze, Evaluate and Implement app development lifecycle including Architecture Design, Testing, Security and Hacking. | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>5</sub> , PO <sub>6</sub> ,<br>PO <sub>12</sub> |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

#### Prerequisite(s): Computer Graphics

#### **Course Objectives:**

- 1. To understand basics of GPU architecture, issues in mapping algorithms and different GPU programming Models.
- 2. To introduce parallel programming fundamentals while focusing on CUDA programming interface.
- 3. To acquaint emerging multi-core parallel computing architecture with Graphics Processing Units (GPUs).
- 4. To introduce the concept of offloading work onto GPUs as accelerators for various applications.

#### **Course Outcomes** (CO):

| COs No.         | Statement  | Mapped Program<br>Outcomes (POs)                                       |
|-----------------|--|--|
| $CO_1$          | Analyze GPU architecture, assess their advantages and identify potential software optimizations based on knowledge of the GPU architecture | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>12</sub>                   |
| CO <sub>2</sub> | Understand the working proficiency with CUDA to optimize and debug GPU code.   | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>4</sub>  |
| CO <sub>3</sub> | Implement efficient algorithms, parallel programming patterns to solve real world problems.  | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>9</sub>  |
| CO <sub>4</sub> | Comprehend the parallel programming techniques and implementation of programs on GPUs.   | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>12</sub> |

 $PO_1$ - Engineering Knowledge,  $PO_2$ - Problem analysis,  $PO_3$ - Design/development of solutions,  $PO_4$ - Conduct investigations of complex problems,  $PO_5$ - Modern tool usage,  $PO_6$ - The engineer and society,  $PO_7$ - Environment and sustainability,  $PO_8$ - Ethics,  $PO_9$ - Individual or team work,  $PO_{10}$ - Communication,  $PO_{11}$ - Project management and finance,  $PO_{12}$ - Life-long Learning

Mapping of course outcomes with program outcomes

## **Detailed Contents:**

| Detailed Contents. |  |
|--------------------|--|
| Unit: 1            | Introduction: History, Graphics Processors, Graphics Processing Units, GPGPUs. Clock speeds, CPU / GPU comparisons, Heterogeneity, Accelerators, Parallel programming, CUDA Open CL / Open ACC, Hello World Computation Kernels, Launch parameters, Thread hierarchy, Warps / Wave fronts, Thread blocks / Workgroups, Streaming multiprocessors, 1D / 2D / 3D thread mapping, Device properties, Simple Programs. |
| Unit: 2            | Memory: Memory hierarchy, DRAM / global, local / shared, private / local, textures, Constant Memory, Pointers, Parameter Passing, Arrays and dynamic Memory, Multi-dimensional Arrays, Memory Allocation, Memory copying across devices, Programs with matrices, Performance evaluation with different memories.   |
| Unit: 3            | Synchronization: Memory Consistency, Barriers (local versus global), Atomics, Memory fence. Prefix sum, Reduction. Programs for concurrent Data Structures such as Work lists, Linked-lists. Synchronization across CPU and GPU Functions: Device functions, Host functions, Kernels functions, Using libraries (such as Thrust), and developing libraries.  |
| Unit: 4            | Support: Debugging GPU Programs. Profiling, Profile tools, Performance aspects Streams: Asynchronous processing, tasks, Task-dependence, Overlapped data transfers, Default Stream, Synchronization with streams. Events, Event-based- Synchronization - Overlapping data transfer and kernel execution, pitfalls.   |
| Unit: 5            | Image Processing, Graph algorithms, Simulations, Deep Learning. Advanced topics: Dynamic parallelism, Unified Virtual Memory, Multi-GPU processing, Peer access, Heterogeneous processing.   |

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

**Prerequisite(s):** Computer Graphics

#### **Course Objectives:**

- To learn the need of Big Data and the various challenges involved and to acquire Knowledge about different analytical
  architectures.
- 2. To understand Hadoop Architecture, ecosystems and acquire knowledge about the NoSQL database.
- 3. To acquire knowledge about the NewSQL, MongoDB and Cassandra databases.
- 4. To Apply the processing of Big Data with advanced architectures like Spark.

#### **Course Outcomes (CO):**

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)                                       |
|-----------------|---|--|
| CO <sub>1</sub> | Understand the knowledge of Big Data, Data Analytics, challenges and their solutions in Big Data. | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>12</sub>                   |
| CO <sub>2</sub> | Analyze Hadoop Framework and Eco systems.   | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>4</sub>  |
| CO <sub>3</sub> | Analyze MapReduce and Yarn, Work on NoSQL environment. MongoDB and Cassandra.                     | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>9</sub>  |
| CO <sub>4</sub> | Apply Big Data using Map-reduce programming in Hadoop and spark framework                         | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>12</sub> |

 $PO_{1}$ - Engineering Knowledge,  $PO_{2}$ - Problem analysis,  $PO_{3}$ - Design/development of solutions,  $PO_{4}$ - Conduct investigations of complex problems,  $PO_{5}$ - Modern tool usage,  $PO_{6}$ - The engineer and society,  $PO_{7}$ - Environment and sustainability,  $PO_{8}$ - Ethics,  $PO_{9}$ - Individual or team work,  $PO_{10}$ - Communication,  $PO_{11}$ - Project management and finance,  $PO_{12}$ - Life-long Learning

## 1 – Reasonable; 2 – Significant; 3 – Strong

## **Detailed Contents:**

| Unit: 1 | Introduction to Deep Learning: Basics: Biological Neuron, Idea of computational units, McCulloch— Pitts unit and Thresholding logic, Linear Perceptron, Perceptron Learning Algorithm, Linear separability. Convergence theorem for Perceptron Learning Algorithm.             |
|---------|--|
| Unit: 2 | Feed forward Networks: Multilayer Perceptron, Gradient Descent, Back propagation, Empirical Risk Minimization, regularization, auto encoders.  |
| Unit: 3 | Convolutional Networks: The Convolution Operation - Variants of the Basic Convolution<br>Function - Structured Outputs - Data Types - Efficient Convolution Algorithms - Random or<br>Unsupervised Features- LeNet, AlexNet  |
| Unit: 4 | Recurrent Neural Networks: Bidirectional RNNs - Deep Recurrent Networks Recursive Neural Networks - The Long Short-Term Memory and Other Gated RNNs  |
| Unit: 5 | Deep Generative Models: Boltzmann Machines - Restricted Boltzmann Machines - Introduction to MCMC and Gibbs Sampling- gradient computations in RBMs Applications: Large-Scale Deep Learning - Computer - Speech Recognition - Natural Language Processing - Other Applications |

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

#### **Course Objectives:**

- To fix software flaws and bugs in various software.
- To provide an overview of various issues like weak random number generation, Information leakage, poor usability, and weak or no encryption on data traffic.
- To introduce techniques for successfully implementing and supporting network services on an enterprise scale and heterogeneous systems environment.
- To design Methodologies and tools for developing secure software containing minimum vulnerabilities and flaws.

#### **Course Outcomes (CO):**

| COs No.         | Statement  | Mapped Program<br>Outcomes (POs)  |
|-----------------|--|---|
| CO <sub>1</sub> | Analyze various software vulnerabilities.                        | PO <sub>1</sub> , PO <sub>2</sub>                                       |
| CO <sub>2</sub> | Understand Software process vulnerabilities for an organization. | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>4</sub>                     |
|                 | 1 &  | / -/  |
| CO <sub>3</sub> | Understand and Monitor resources consumption in a software.      | PO <sub>4</sub> , PO <sub>5</sub>                                       |
| CO <sub>4</sub> | Apply security and software development process.                 | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>5</sub> , PO <sub>9</sub> , |
|                 |  | $PO_{12}$   |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

Mapping of course outcomes with program outcomes

| CO <sub>3</sub>    |                 |                 |                 | 3               | 2               |                 |                 |                 |                 |                  |                  |                  |
| CO <sub>4</sub>    |                 |                 | 2               | 3               | 2               |                 |                 |                 | 2               |                  |                  | 2                |

1 - Reasonable; 2 - Significant; 3 - Strong

Secure Software Design - Identify software vulnerabilities and perform software security

Understand the requirements of an enterprise network and how to go about managing them. Handle insecure exceptions and command/SQL injection, Defend web and mobile

applications against attackers, software containing minimum vulnerabilities and flaws. Case

#### **Detailed Contents:**

Unit: 4

Unit: 5

| Unit: 1   | analysis, Master security programming practices, Master fundamental software security   |
|-----------|---|
|           | design concepts, Perform security testing and quality assurance.  |
| Unit: 2   | Enterprise Application Development - Describe the nature and scope of enterprise software applications, Design distributed N-tier software application, Research technologies available for the presentation, business and data tiers of an enterprise software application, Design and build a database using an enterprise database system, Develop components at the different tiers in an enterprise system, Design and develop a multi-tier solution to a problem using technologies used in enterprise system, Present software solution. |
| Unit: 3   | Enterprise Systems Administration: Design, implement and maintain a directory-based server infrastructure in a heterogeneous systems environment, monitor server resource utilization for system reliability and availability, Install and administer network services (DNS/DHCP/Terminal Services/Clustering/Web/Email).   |
| I Init. 4 | Obtain the ability to manage and troubleshoot a network running multiple services,  |

study of DNS server, DHCP configuration and SQL injection attack. Examination and Evaluation Pattern: It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

#### Prerequisite(s): Computer Networks

#### **Course Objectives:**

- 1. To gain an overview of wireless access technologies, Fixed wireless access networks. Terminal mobility issues regarding wireless access to Internet
- 2. To introduce various Network topologies, hotspot networks, Communication links: point-to-point, point-to-multipoint, multipoint-to-multipoint.
- 3. To provide an overview of Standards for most frequently used wireless access networks: WPAN, UWB, WLAN, WMAN, WWAN. Network services. Wireless access networks planning, design and installation.
- 4. To get and insight of Wireless networking security issues, Wireless access network exploitation and management, software requirements, link quality control.

1 – Reasonable; 2 – Significant; 3 – Strong

#### Detailed Contents:

| Detailed Contents: |  |
|--------------------|--|
| Unit: 1            | Necessity for wireless terminals connectivity and networking. Wireless networking advantages and disadvantages, Overview of wireless access technologies. Narrowband and broadband networks, fixed and nomadic networks. Wireless local loop (WLL), Public Switched Telephone Network (PSTN) interfaces.   |
| Unit: 2            | Fixed wireless access (FWA) networks, frequency bands for different networks. Criterions for frequency bands allocation, Network topologies, hotspot networks. Communication links: point-to-point (PTP), point- to- multipoint (PMP), multipoint-to-multipoint (MTM).   |
| Unit: 3            | Standards for most frequently used wireless access networks: WPAN (802.15, Bluetooth, DECT, IrDA), UWB (Ultra-Wideband), WLAN (802.11, Wi-Fi, HIPERLAN, IrDA), WMAN(802.16, WiMAX, HIPERMAN, HIPERACCESS), WWAN (802.20), Other technologies for broadband wireless access, Local Multipoint Distribution Service (LMDS), Multichannel Multipoint Distribution Service (MMDS). Ad -Hoc networks, Network services. Services types based on carrier frequency and bandwidth   |
| Unit: 4            | Wireless access networks planning, design and installation. Services provision, legislative and technical aspects, Technical and Economical factors for network planning: expenses, coverage, link capacity, network complexity and carrier-to-interference ratio (C/I). Base station or access point allocation. Base station and access point equipment. Terminal mobility issues regarding wireless access to Internet. Wireless networking security issues.  |
| Unit: 5            | Example of laptop or handheld PC wireless connection in real environment. PC wireless interface equipment. Wireless access network exploitation and management, software requirements, link quality control. Business model, wireless network services market, market research and marketing, service providers, wireless data application service providers (WDASP) and their role on public telecommunication services market, billing systems. Recent trends in wireless networking and various access mechanism, new standards of wireless |

communication.

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

| Prerequisite(s): Machine I | earı | ning and Data Mining |               |         |        |     |      |            |

#### **Course Objectives:**

- To prepare the data for analysis.
- To develop meaningful Data Visualizations.
- To Learn data transformations and segmentation to solve statistical problems
- To Create accurate dataset for applications.

**Course Outcomes (CO):** 

| COs No.         | Statement  | Mapped Program<br>Outcomes (POs)                                       |
|-----------------|--|--|
| CO <sub>1</sub> | Understand the data parsing and transformations. and the difference between data and information with formats                          | $PO_1, PO_2$   |
| CO <sub>2</sub> | Analyze the basic concept of data cleaning for valuable information with a minimum consistency checking.                               | PO <sub>2</sub> , PO <sub>4</sub> , PO <sub>6</sub>                    |
| CO <sub>3</sub> | Understand statistical exploratory analysis with hypothesis generation   | PO <sub>4</sub> , PO <sub>7</sub> , PO <sub>9</sub>                    |
| CO <sub>4</sub> | Analyze Design visualizations for exploratory analysis and understand the concept of correlations and connections for geo located data | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>5</sub> , PO <sub>12</sub> |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

1 - Reasonable; 2 - Significant; 3 - Strong

| <b>Detailed Contents:</b> |   |
|---------------------------|---|
| Unit: 1                   | Data Gathering and Preparation: Data formats, parsing and transformation, Scalability and real-time issues                                    |
| Unit: 2                   | Data Cleaning: Consistency checking, Heterogeneous and missing data, Data Transformation and Segmentation.                                    |
| Unit: 3                   | Exploratory Analysis: Descriptive and comparative statistics, Clustering and association, Hypothesis Generation.                              |
| Unit: 4                   | Visualization: Designing visualizations, Time series, Geolocated data, Correlations and connections, Hierarchies and networks, interactivity. |
| Unit: 5                   | Ethics in the Profession: Cases in Computing, Statistics, Communication, Professional Ethics Codes: ACM, IEEE, Am Stat. Assoc.                |

Examination and Evaluation Pattern: It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

## **Text Books:**

- Making sense of Data: A practical Guide to Exploratory Data Analysis and Data Mining, by Glenn
- The Visual Display of Quantitative Information, by Edward R. Tufte

- Visualizing Data: Exploring and Explaining Data with Processing Environment, by Ben Fry
- Exploratory Data Mining and Data Cleaning, by Tamraparni Dasu

#### **Prerequisite(s):** Machine Learning

#### **Course Objectives:**

- 1. To provide insight to the mathematical formulation of real-world problems.
- 2. To understand problem formulation by using linear, dynamic programming, game theory and queuing models.
- 3. To optimize this mathematical solution especially useful for NP-Hard problems using nature-based algorithms.
- 4. To introduce operation research models using optimization techniques based upon the fundamentals of engineering mathematics (minimization and Maximization of objective function).

**Course Outcomes (CO):** 

| COs No.         | Statement  | Mapped Program<br>Outcomes (POs)                                      |
|-----------------|--|---|
| $CO_1$          | Understand appropriate optimization method to solve complex problems involved in various industries.   | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>4</sub>                   |
| CO <sub>2</sub> | Analyze the appropriate algorithm for allocation of resources to optimize the various programming techniques.  | PO <sub>3</sub> , PO <sub>4</sub> , PO <sub>5</sub>                   |
| CO <sub>3</sub> | Understand the concept of theoretical workings of the graphical, simplex and analytical methods for making effective decision on variables so as to optimize the objective function. | PO <sub>4</sub> , PO <sub>6</sub> , PO <sub>9</sub>                   |
| CO <sub>4</sub> | Comprehend the theoretical foundations of various issues related to linear programming modeling to formulate real-world problems as a L P model.                                     | PO <sub>4</sub> , PO <sub>5</sub> , PO <sub>6</sub> , PO <sub>9</sub> |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning

1 – Reasonable; 2 – Significant; 3 – Strong

| Detalled | Contents: |
|----------|-----------|
|          |           |

| Unit: 1 | Introduction to Optimization: Engineering application of Optimization – Statement of an Optimization problem - Optimal Problem formulation - Classification of Optimization problem. Optimum design concepts: Definition of Global and Local optima – Optimality criteria - Review of basic calculus concepts – Global optimality  |
|---------|--|
| Unit: 2 | Linear Programming: Introduction and formulation of models, Convexity, Simplex method, BigM method, Two-phase method, Degeneracy, non-existent and unbounded solutions, revised simplex method, duality in LPP, dual simplex method, sensitivity analysis, transportation and assignment problems, traveling salesman problem.   |
| Unit: 3 | Nonlinear Programming: Introduction and formulation of models, Classical optimization methods, equality and inequality constraints, Lagrange multipliers and Kuhn-Tucker conditions, quadratic forms, quadratic programming problem, Wolfe's method.   |
| Unit: 4 | Dynamic Programming: Principle of optimality, recursive relations, solution of LPP. Optimization algorithms for solving constrained optimization problems – direct methods – penalty function methods – steepest descent method - Engineering applications of constrained and unconstrained algorithms.  |
| Unit: 5 | Integer Linear Programming: Gomory's cutting plane method, Branch and bound algorithm, Knapsack problem, linear 0-1 problem. Modern methods of Optimization: Genetic Algorithms - Simulated Annealing - Ant colony optimization - Tabu search - Neural-Network based Optimization - Fuzzy optimization techniques - Applications. Use of Matlab to solve optimization problems. Software: Introduction to software for optimization techniques (TORA). |

**Examination and Evaluation Pattern:** It include both internal evaluation (30 marks) comprising two class sessional exams/ assignments/ quiz/ seminar presentation etc. and external evaluation (70 marks) which is mainly end semester examination.

#### **Prerequisite(s):** Data structure & Algorithms

#### **Course Objectives:**

- 1. To learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- 2. To critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- To develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
- 4. To critically understand the strengths and weaknesses of disaster management approaches, planning and programming in different countries, particularly their home country or the countries they work in.

**Course Outcomes (CO):** 

| COs No.         | Statement   | Mapped Program<br>Outcomes (POs)                                      |
|-----------------|---|---|
| CO <sub>1</sub> | Explain disaster management theory (cycle, phases, risk, crisis, emergency, disasters, resilience).                                   | PO <sub>6</sub> , PO <sub>7</sub>                                     |
| CO <sub>2</sub> | Create Technological innovations in Disaster Risk Reduction: Advantages and problems.   | PO <sub>1</sub> , PO <sub>2</sub> , PO <sub>4</sub> , PO <sub>5</sub> |
| CO <sub>3</sub> | Evaluate DM study including data search, analysis and presentation as a case study.   | PO <sub>2</sub> , PO <sub>3</sub> , PO <sub>5</sub>                   |
| CO <sub>4</sub> | Apply knowledge about existing global frameworks and existing agreements and role of community in successful Disaster Risk Reduction. | PO <sub>7</sub> , PO <sub>10</sub> , PO <sub>12</sub>                 |

PO<sub>1</sub>- Engineering Knowledge, PO<sub>2</sub>- Problem analysis, PO<sub>3</sub>- Design/development of solutions, PO<sub>4</sub>- Conduct investigations of complex problems, PO<sub>5</sub>- Modern tool usage, PO<sub>6</sub>- The engineer and society, PO<sub>7</sub>- Environment and sustainability, PO<sub>8</sub>- Ethics, PO<sub>9</sub>- Individual or team work, PO<sub>10</sub>- Communication, PO<sub>11</sub>- Project management and finance, PO<sub>12</sub>- Life-long Learning
